

Networked Digital Signage

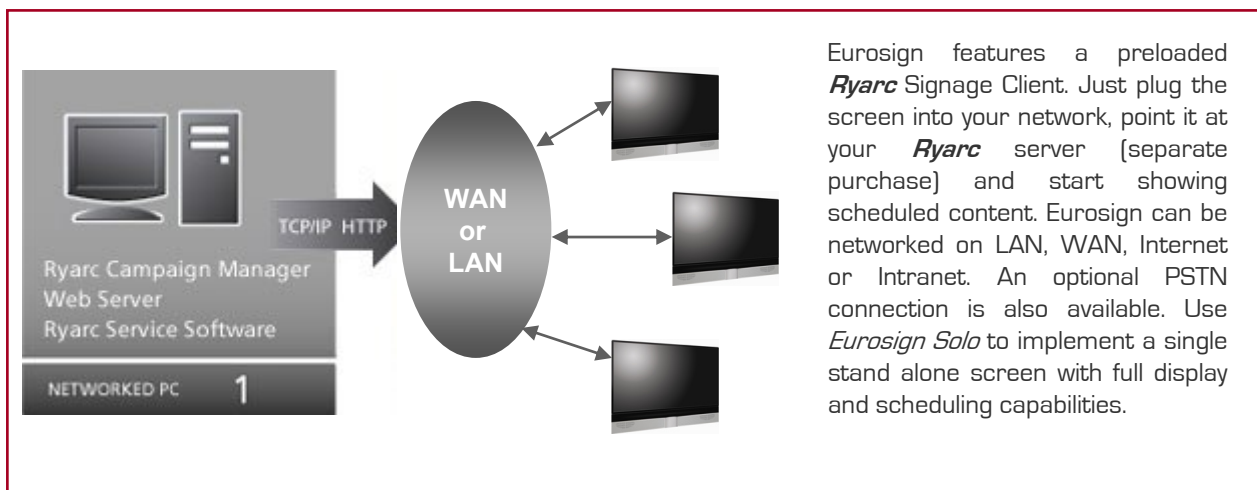

Wouldn't it be great if someone could provide a high impact, large format digital sign that integrated screen and media player in a single styled enclosure – just plug in the power, add broadband and go? What if you could deploy this level of digital signage at an economical site cost and control your new network with a standard webserver architecture?

This isn't just wishful thinking – It's now a reality. Radiant Europe introduces *EuroSign*, a range of high impact digital signage that sets new standards in performance and value.

Radiant Europe's digital signage solution harnesses the power of **Ryarc** signage software. Each display has an embedded XP platform, sophisticated media player technology and readily connects to a choice of network architectures.

- High Brightness, Wide Screen Display
- High Contrast, High Resolution
- Single box solution with integrated media player
- Any content from pictures to HDTV
- Multiple Screens, Tickers, RSS
- Powerful Signage Software – Network Ready
- Integrated audio and speakers
- Single source solution – one enclosure
- Wide viewing angle, VESA Mount

Eurosign features a preloaded **Ryarc** Signage Client. Just plug the screen into your network, point it at your **Ryarc** server (separate purchase) and start showing scheduled content. Eurosign can be networked on LAN, WAN, Internet or Intranet. An optional PSTN connection is also available. Use *Eurosign Solo* to implement a single stand alone screen with full display and scheduling capabilities.

"Seeing is believing"
